

Foreword

I am delighted to be able to write a few words of introduction to this new book. It is published a very important time. There is clearly an upsurge of interest in science and chemical research in our educational field. We can all benefit from the development of the thinking and dialogue for developing relationship with the world of science.

This book is specifically written for the researchers and students. Bui students are very sensitive. Most of them are in windy age. Their world is different from others. It is indeed a challenging task for a writer to enter their world because these readers are going to be tomorrow's responsible citizens. This book reflects new guidelines that have evolved in various disciplines on Organic Spectroscopy.

It is my hope and expectation that this book will provide an effective learning experience and referenced resource for all researchers and students of chemistry. I think that the authors can be confident that there will be many grateful readers who will have gained a broader perspective or the disciplines of chemical synthesis and spectroscopy analysis as a result of their efforts.

One can say that Dr. Sushilkumar Dhanmane has done some pioneering work in this sphere. If history records it, then Dr. Dhanmane's efforts will not be wasted.
